

SCREENSHOTS USED IN THE PROJECT

Screenshot 1: Live Frontend Website

Description:

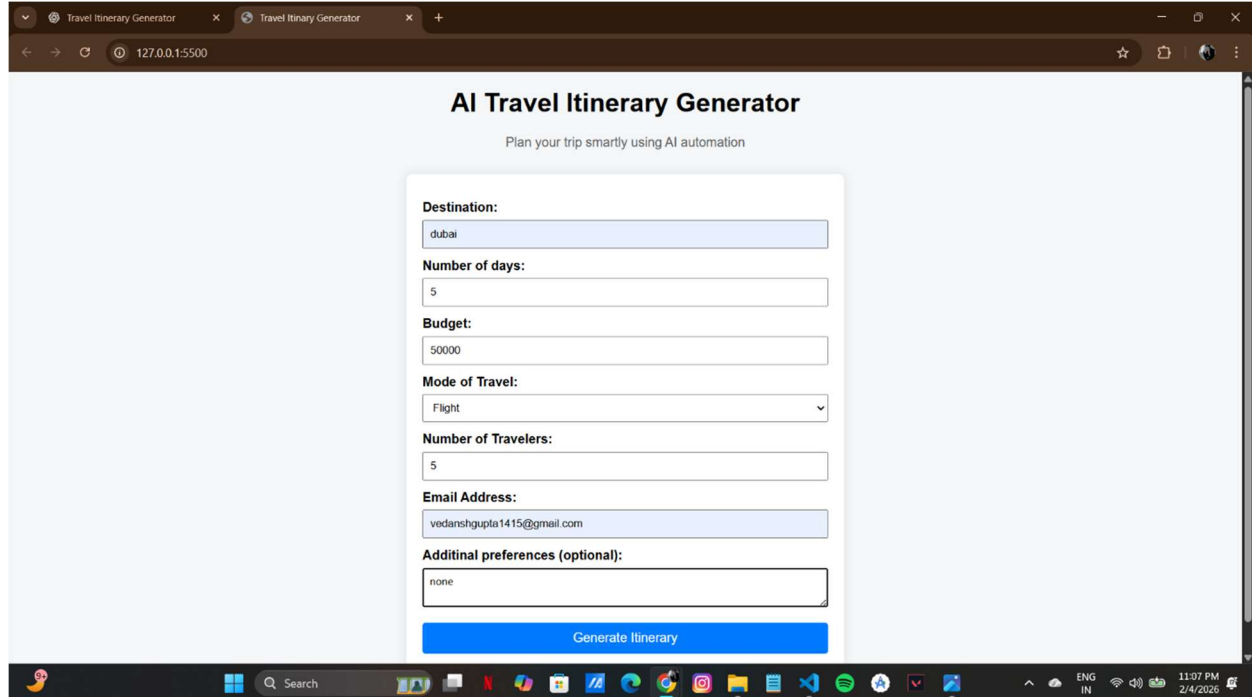

This screenshot shows the live Travel Itinerary Generator frontend hosted on GitHub Pages.

The form collects user inputs such as destination, number of days, budget, travel mode, number of travelers, and email address.

The browser address bar with the live URL is visible, confirming successful deployment.

Live URL:

<https://vedansh1123.github.io/travel-itinerary-generator/>

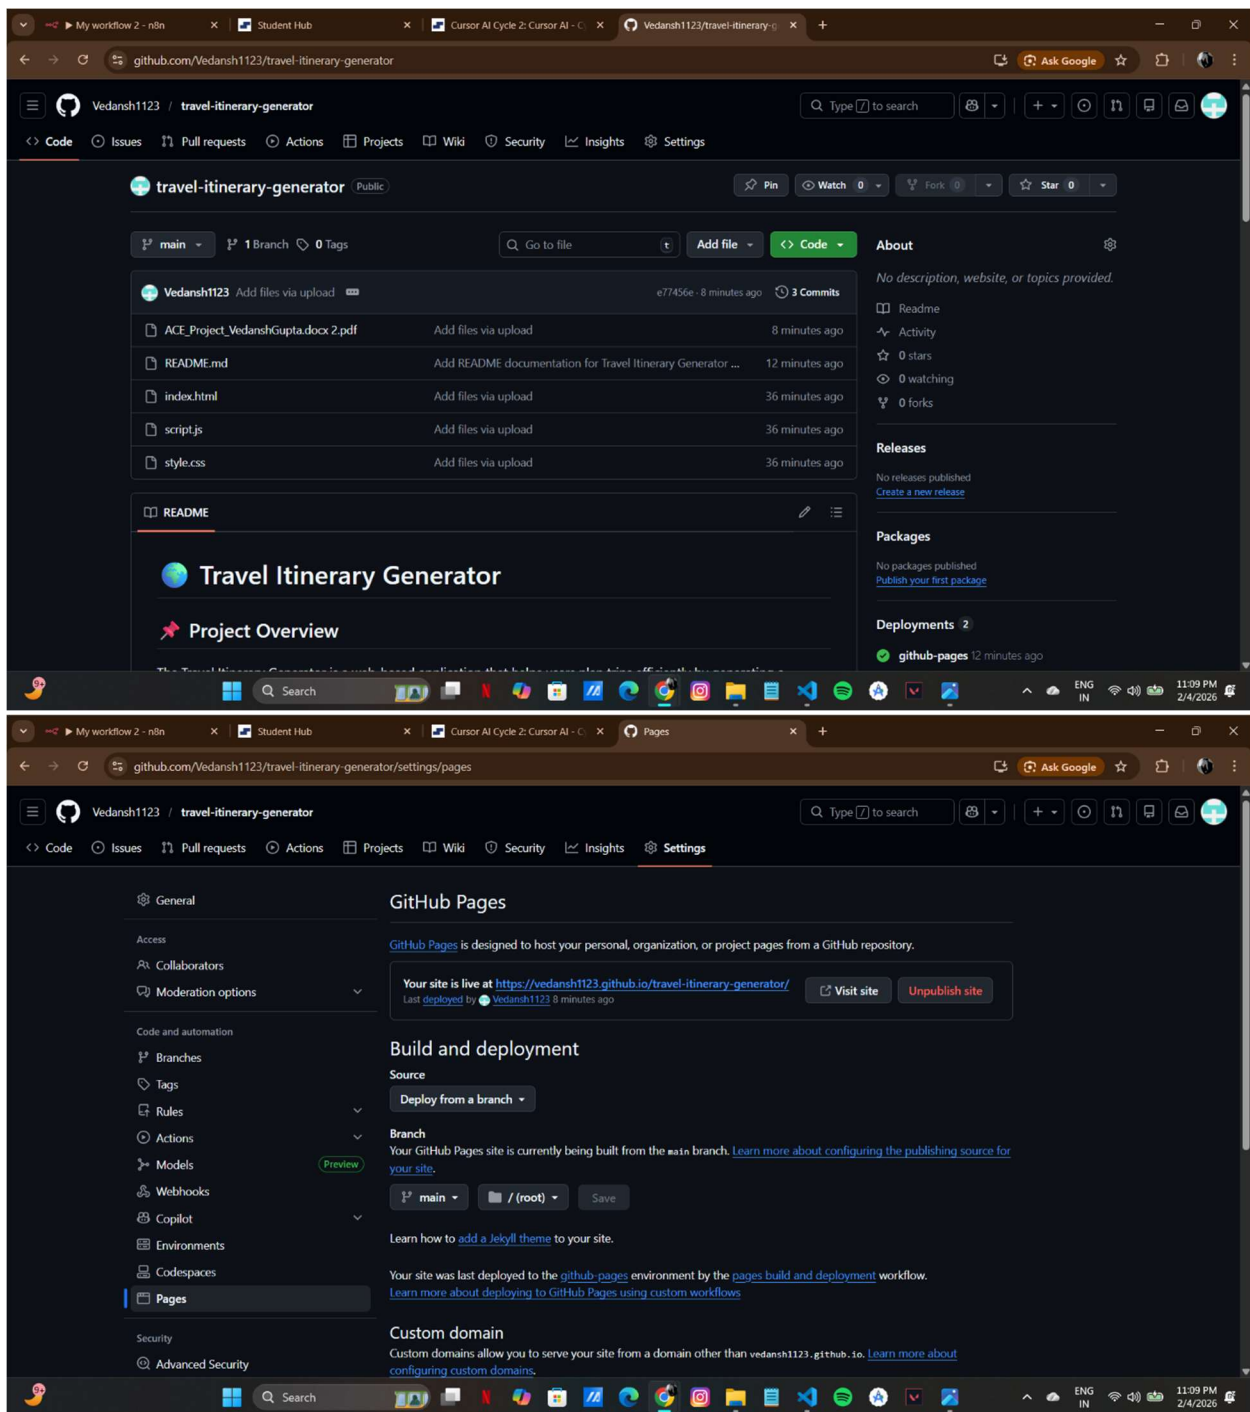

The screenshot displays a web browser window with two tabs titled "Travel Itinerary Generator". The address bar shows the URL "127.0.0.1:5500". The webpage has a light blue background and a central white form titled "AI Travel Itinerary Generator" with the subtitle "Plan your trip smartly using AI automation". The form contains the following fields: "Destination:" with the value "dubai", "Number of days:" with the value "5", "Budget:" with the value "50000", "Mode of Travel:" with a dropdown menu showing "Flight", "Number of Travelers:" with the value "5", "Email Address:" with the value "vedanshgupta1415@gmail.com", and "Additional preferences (optional):" with the value "none". A blue "Generate Itinerary" button is located at the bottom of the form. The Windows taskbar at the bottom shows the time as 11:07 PM on 2/4/2026.

Screenshot 2: GitHub Repository

Description:

This screenshot shows the public GitHub repository containing the project source code.

The repository includes `index.html`, `style.css`, `script.js`, `README.md`, and the project documentation file. This confirms that the source code is properly uploaded and publicly accessible.

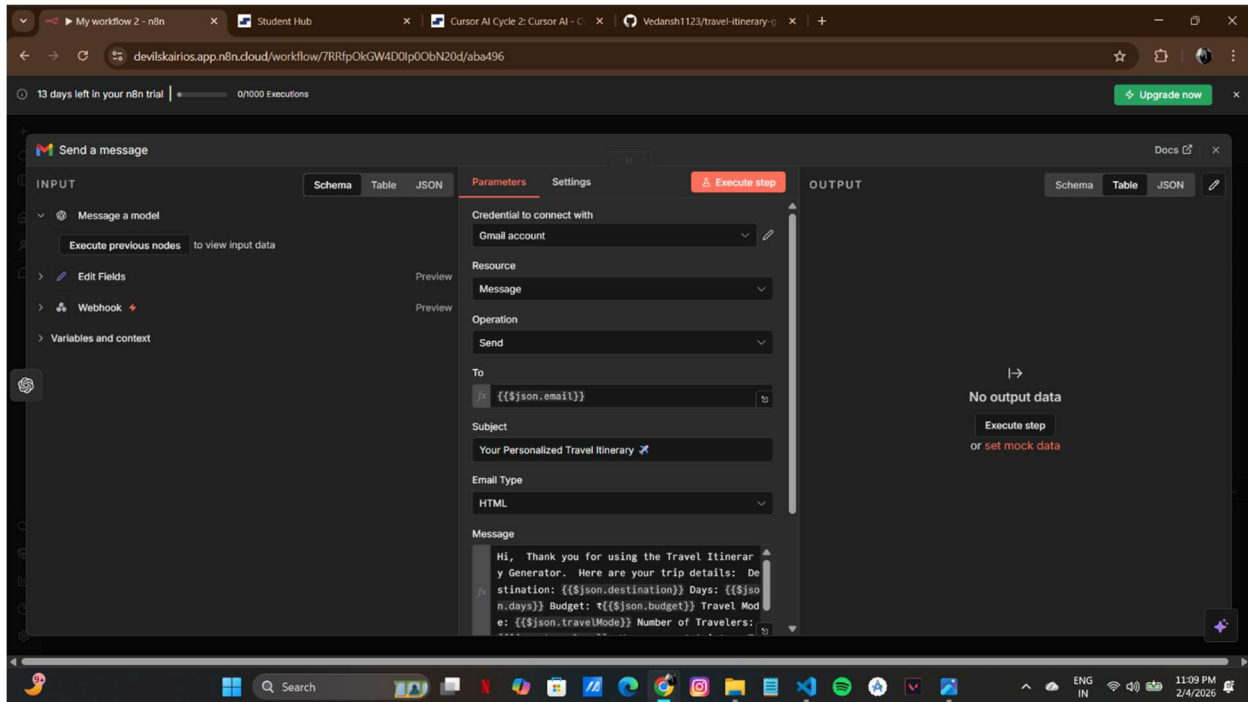

Screenshot 3: n8n Workflow Canvas

Description:

This screenshot displays the complete n8n automation workflow canvas.

The workflow includes a Webhook node to receive frontend data, an Edit Fields node to structure the input, an AI/LLM node for itinerary generation, and a Gmail node to send

the itinerary via email.

Screenshot 4: Webhook Data Received

Description:

This screenshot shows the output of the Webhook node in n8n.

It confirms that data sent from the frontend is successfully received in JSON format, including destination, number of days, budget, travel mode, number of travelers, and email address .

Screenshot 5: Email (Gmail) Node Configuration

Description:

This screenshot shows the Gmail email node configuration in n8n.

The recipient email field uses a dynamic value (`{{ $json.email }}`), along with a subject and message body. This confirms that the itinerary is configured to be sent automatically to the user's email address.

Here are some screenshots showing the live frontend of the Travel Itinerary Generator hosted on GitHub Pages.

Here are some screenshots of the GitHub repository displaying the project source code files and documentation.

Here are some screenshots of the n8n automation workflow used to process user inputs and automate itinerary delivery.

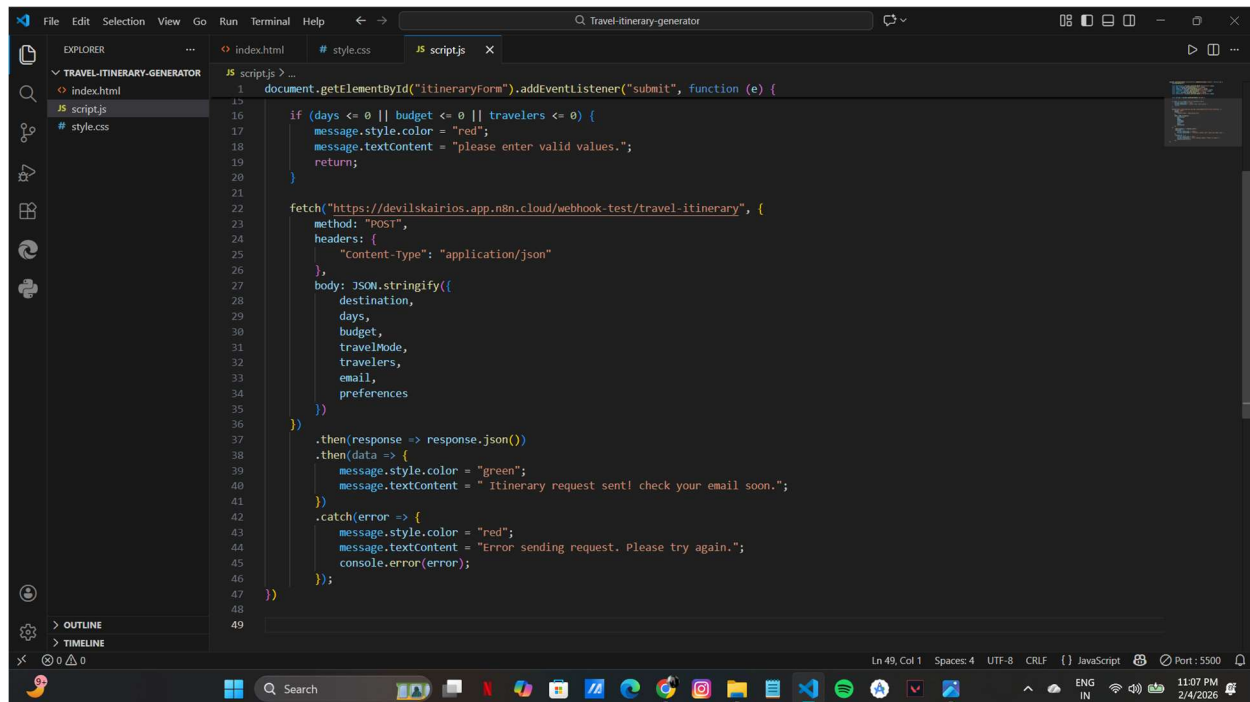

Here are some screenshots showing the webhook node receiving user data from the frontend form.

Here are some screenshots of the email (Gmail) node configuration used to send the itinerary to the user.

Here are some screenshots demonstrating the end-to-end workflow from form submission to email delivery.

Here are some screenshots highlighting the integration between the frontend, automation workflow, and email service.

Here are some screenshots that provide proof of successful deployment and automation setup.

```
1 document.getElementById("itineraryForm").addEventListener("submit", function (e) {
15
16     if (days <= 0 || budget <= 0 || travelers <= 0) {
17         message.style.color = "red";
18         message.textContent = "please enter valid values.";
19         return;
20     }
21
22     fetch("https://devilskairios.app.n8n.cloud/webhook-test/travel-itinerary", {
23         method: "POST",
24         headers: {
25             "Content-Type": "application/json"
26         },
27         body: JSON.stringify({
28             destination,
29             days,
30             budget,
31             travelMode,
32             travelers,
33             email,
34             preferences
35         })
36     })
37     .then(response => response.json())
38     .then(data => {
39         message.style.color = "green";
40         message.textContent = "Itinerary request sent! check your email soon.";
41     })
42     .catch(error => {
43         message.style.color = "red";
44         message.textContent = "Error sending request. Please try again.";
45         console.error(error);
46     });
47
48
49 })
```
